INZECTO MOSQUITO CHIPS

Revolutionary INZECTO Mosquito Chips

NEXT GEN PEST CONTROL

Backed by Science

Developed at The Entomology Department of the University of Florida, Ranked #1 in the World R&D Co-Funded by the Pentagon

AWARD WINNNING REVOLUTIONARY PEST CONTROL PRODUCTS

Financial Times / IFC World Bank Group Transformational Business **2019 Top 8 Finalist in the World**

REVOLUTIONARY TECHNOLOGY BACKED BY SCIENCE CO-INVENTED BY DR. PHIL KOEHLER

INZECTO's revolutionary pest-control product line launched by Florida Insect Control Group has been awarded numerous awards for our groundbreaking technology. Co-Invented by **Dr. Phil Koehler**, Professor Emeritus of Urban Entomology, at the University of Florida and with the initial R&D funded by the **Pentagon**. INZECTO's initial goal being to protect deployed war-fighters from flies, mosquitoes, and insect-borne diseases our products have obtained six patents and counting.

The internal surface of the INZECTO **Mosquito Chip** is coated with our patented **pesticide-embedded micro-porous coating**. The porosity is small enough to protect the pesticides from early degradation but large enough to allow their slow release. The patented coating slowly releases larvicide to safely and effectively kill mosquito larvae.

The **INZECTO Mosquito Chip** kills mosquito larvae in virtually any container with no harm to other water life such as fish, turtles, or crustaceans. The polymer coating on the ceramic chips stabilizes and slowly releases the active larvicidal ingredient. INZECTO Mosquito chips last for 3 Months, a typical mosquito season, and are safe to utilize around birds, pets, and other beneficial insects.

Dr. Phil Koehler, Professor Emeritus Co-Inventor of INZECTO Mosquito Chips

INZECTO MOSQUITO CHIP

Our patented coating utilizes a micro-dose of pesticides embedded into the chip surface.

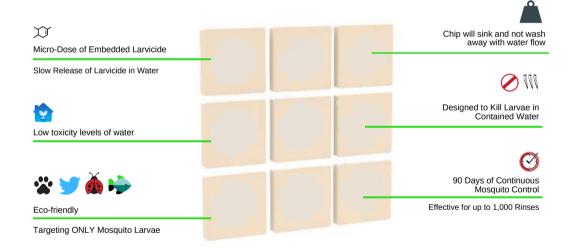

Designed for **mosquito prevention**, drop chips in all the water containers around your house at the beginning of the season to prevent the annoyance of urban mosquitoes in your yard. These mosquitoes can carry dangerous diseases to humans such as Dengue, Zika, Yellow Fever, Chikungunya, West Nile, and diseases transmissible to your pets.

Features

- Effective prevention of mosquito larvae with embedded micro-dose of larvicide
- Simple installation and no maintenance
- · Chips sink to the bottom of containers and will not float away
- · Chips remain active and efficient after multiple rinses
- 90 days of mosquito control minimizing replacement costs and requires no reapplication of actives
- Safe for water-life, pets, birds, and other animals as well as beneficial insects

Actives

Pyriproxyfen PBO

Applications

- Bird Baths
- Fountains
- Storm Drains
- Tires

- Buckets
- Garbage Cans
- Gutters
- Rain Barrels
- Barbecues
- Holes in Trees
- Over-Watered Areas
- Water Gardens
- Water Under House
- Neglected Pools
- Neglected Hot Tubs
- Open Boats
- Wheelbarrows

INSTALLATION

Installation: Drop a single Mosquito Chip into any container where mosquitoes may develop.

Coverage of Traps: Each Chip treats up to 20 Liters of 5.2 Gallons of Water. For larger containers utilize multiple chips.

Maintenance: No Maintenance required once deployed. Dispose of chips after 90 Days of use.

Effectiveness: Chips will begin working immediately once activated in water. and continuously for 3 Months. Population visibly reduced within one week from deployment and continued population control for 3 months and 1,000 Rinses.

Chips Become Active in Contact with Water
Chips stop releasing larvicide if the container becomes dry
Chips will resume releasing larvicide once returning in contact with water, ie: next rain

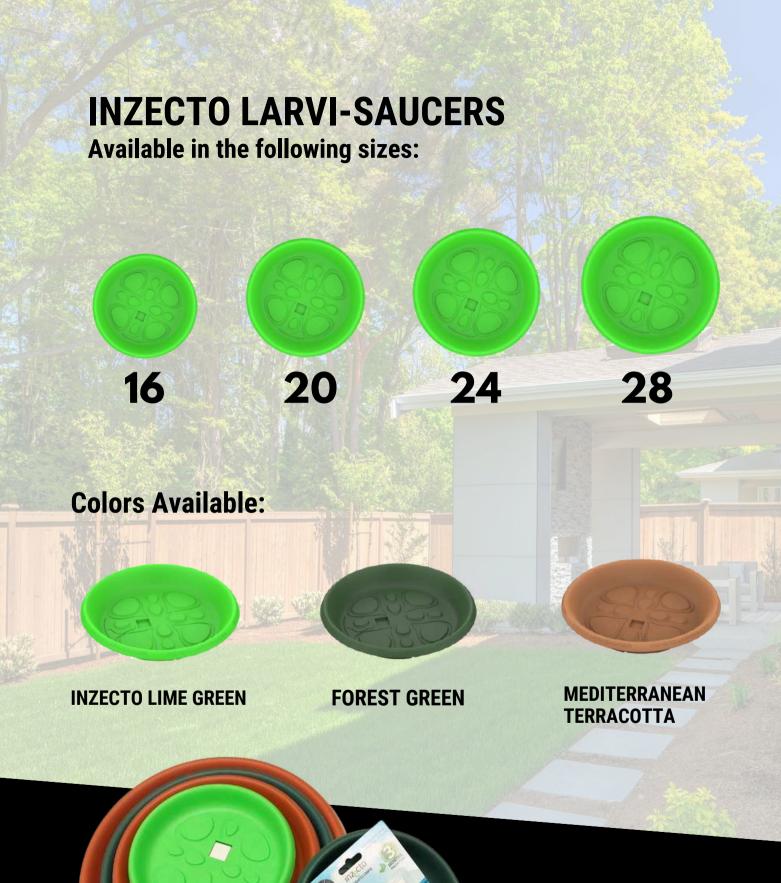

NOTE: The larvicide released in the water does not immediately kill the larvae but is a growth inhibitor ensuring the larvae will not develop into adults. Live larvae may still be present but will not emerge.

Utilize **INZECTO Saucers** in association with our Chips to ensure that your passion for gardening doesn't create a breeding ground for mosquitoes!
