

HYDR  TRAIL™
Science by INZECTO

Termite Guiding Technology

HydroTrail Directs Wood-Seeking Termites into Termite Stations

CREATES A TERMITE "PROTECTION ZONE" FOR **THREE(3)** MONTHS

SAFE AND BIODEGRADABLE

2X MORE HITS
FASTER

TERMITE DETECTION

Subterranean Termites

- Native Subterranean Termites
- Formosan Termites

FOR USE WITH
TERMITE STATIONS

TESTIMONIALS

"After conducting field trials and reviewing laboratory research, I saw a lot of potential for HydroTrail to improve bait performance and to protect structures. The HydroTrail Detect and Direct System can be a game changer for termite treatments."

*Paul Hardy, retired
Director of Technical Services, Orkin Exterminating*

"We investigated HydroTrail and termite monitors in our University of Florida Urban Entomology Laboratory and in the field. HydroTrail effectively links the space between monitor stations so termites trail to stations rather than possibly foraging between stations to damage the structure."

*Phil Koehler, PhD Professor Emeritus
University of Florida, Department of Entomology*

"When my laboratory discovered a chemical that termites would follow, I knew we had a way to manage their behavior; a way to direct them away from the home and toward their demise."

Dr. Gregg Henderson, PhD LSU Urban Entomologist, Emeritus

"As a early user of HydroTrail, I've been able to share with other pest professionals how HydroTrail helped termites find installed monitoring stations that hadn't had any previous activity. I'm excited to see this emerging technology improve termite detection and grow revenue."

*Dr. Claude Thomas, PhD Entomology,
Lindsey Pest Services, Jacksonville, Florida*

GREEN SOLUTION, NO PESTICIDES

Easy to Use
90-day persistence in soil
Biodegradable
No digging / trenching

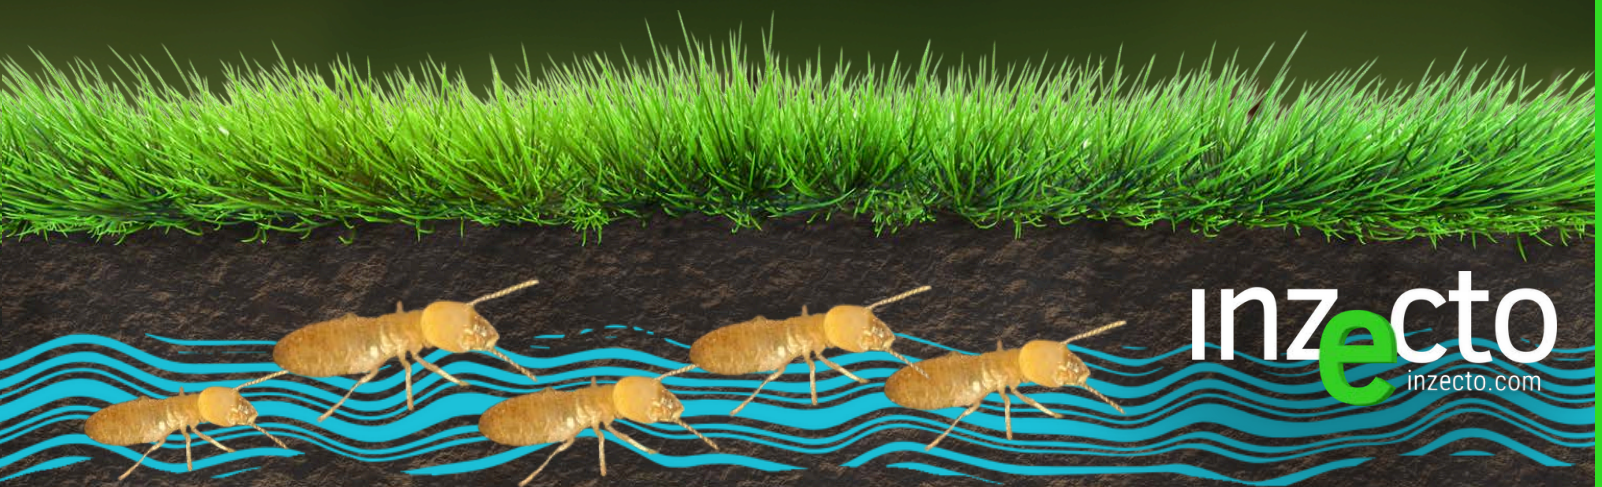

Soil type	HydroTrail % in finished solution	HydroTrail to add (ml per gallon of water)	Gallons of solution to apply per 10 ft	Water applied (gal/10 ft) after application
Sand	0,1	4	4	0
Sandy and silty soil	0,2	7,5	2	2
Loam	0,4	15	1	3
Clay soil*	2	76	0,2	3,8

HydroTrail Application Rates

- Directs termites away from structures and into termite stations
- Reduces the time for termites to discover termite stations
- **“Connect the Stations”** application for continuous detection between termite stations installed around structures
- Improves detection of termite infestations
- Proven efficacy for Native Subterranean and Formosan termites

HydroTrail is intended only for aiding in the detection of a pest.

HydroTrail meets the FIFRA exception of 40 CFR 152.10(b) and is not a pesticide or subject to the requirements of FIFRA.
