

# HYDROTRAIL AG INSTRUCTIONS FOR USE

1

## IDENTIFY INFESTATION AREAS

Begin by identifying all above ground areas of termite infestation. Look for visible damage points, mud tubes on surfaces, and compromised wood structures.

2

## OPEN INFESTED AREAS

Carefully break open infested wood or mud tubes to expose the termite activity. This disruption is necessary for effective treatment.

3

## APPLY HYDROTRAIL AG

Spray Hydro Trail AG onto the prepared surface.

4

## INSTALL ABOVE GROUND STATION

Place the above ground station directly on top of the treated area. Ensure firm contact between the station and the surface.

5

## MAINTENANCE PROTOCOL

Anytime you open an above ground station for monitoring, refill, or substitution, you are disturbing the termites. Always retreat the infested surface with Hydro Trail AG to reduce the risk that termites abandon the station.

### FASTER DETECTION

Helps termites find treatment faster.

### MORE HITS

Supports higher station discovery and activity.

### BETTER PROTECTION

Supports reduction of structural damage.

### LESS DAMAGE & LOWER RISK

May help reduce insurance claims and premiums.

HYDROTRAIL AG AND ABOVE GROUND STATIONS CAN BE APPLIED IN MULTIPLE LOCATIONS WHEREVER TERMITES INVADE.
