

$6.8B

Estimated litigation between pest control and insurance in a market worth about $5B annually.

Leading insurance companies are already providing discounts to operators who are integrating HydroTrail into their treatments. Check with your insurance provider to see if discounts are available to you.

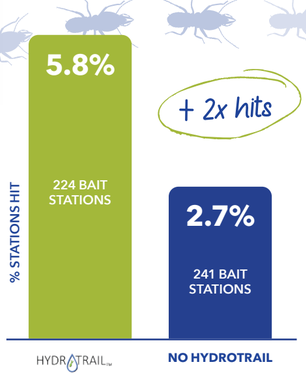

More protection, less litigation.

Treated once and tested for 9 months.

A total of 465 treated and untreated stations were deployed around a single condominium property in Fort Myers, Florida.

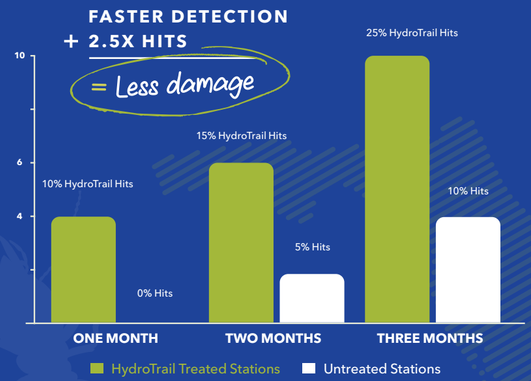

"The hit rate of treated stations was more than **twice the untreated stations**. The efficacy of HydroTrail is a no-brainer! I am planning on **applying HydroTrail to all my new and renewal** termite treatments."

–Scott Kight,
Ft. Myers Pest Control

Faster detection. More hits.

A total of 80 stations—40 treated and 40 untreated—were deployed during a 2024 field study in Jacksonville, Florida.

TERMITE DIRECTING TECHNOLOGY

HydroTrail directs subterranean termites into stations, with above and in-ground solutions.

FASTER DETECTION
2.5X MORE HITS
BIODEGRADABLE
+ LONG DURATION
= More Structural Protection

HYDRATRAIL™

HydroTrail™ preventative structural protection

Directs foraging subterranean termites into in-ground termite stations before they can damage structures.

- **2x Faster Detection:** Reduces the time for termites to discover termite stations.
- **Proven efficacy:** Developed at the University of Florida and field tested extensively to improve efficacy of termite stations.
- **Easy to apply:** No digging / trenching, just mix and apply to soil.
- **Biodegradable:** Not a pesticide, no repellents. No PPE required for application.
- **Reduces need** for long-lasting residual insecticides needed to correct failures.

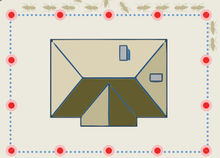

HOW TO USE HYDROTRAIL™

01.

Measure the perimeter of the house and calculate water volume per linear foot.

100 LINEAR FEET	2 GALLONS OF WATER	160 ML OF HYDROTRAIL

02.

Mix with water according to the Instructions for Use.

03.

Apply to Soil Surface
Spray the mixture on soil surface to connect the stations.

Reduces risk of termites tunneling between stations

Improves the structural protection

04.

Annual Application
Monitor the stations regularly for activity. Reapply yearly at annual inspection.

HYDRATRAIL AG

Corrective above-ground termite directing technology

HydroTrail AG application helps leading termites to above ground station during an active infestation.

- Reduce rejection & abandonment when the station is open
- Increase Insecticide consumption and feeding
- Faster detection
- More hits, better protection
- Ready to use; no dilution needed
- Biodegradable
- No PPE required

HOW TO USE HYDROTRAIL AG

1. **Identify** infestation areas
2. **Open** infested areas
3. **Spray** HydroTrail AG
4. **Install** above-ground station
5. **Maintenance**: re-treat whenever station is opened

Watch the video

HYDROTRAIL AG IS IDEAL FOR:

- MUD TUBES
- DECKS
- STRUCTURAL WOOD
- DAMAGED WOOD
- LANDSCAPE TIMBERS
- BOATS
- FENCE POSTS
- TREES
- FIREWOOD

HYDROTRAIL IS EFFECTIVE AGAINST

Native Subterranean Termites

- Eastern Subterranean Termite
- Dark Southern Subterranean Termite
- Light Southern Subterranean Termite
- Subterranean Termite
- Arid-Land Subterranean Termite
- Western Subterranean Termite

Invasive Species

- Formosan Subterranean Termite
- Asian Subterranean Termite
